Abstract (en)

The rack (28): forms a part of the machines rack of the loom; exhibits warp beam, streak beam, shanks (35) and lamellae; is transferred into a transport position by gears between the weaving looms; and is moved in the transport position in relation to the operating position around a horizontal axis of rotation, which is in a distance of the rotation axis of the warp beam. The width of the rack is reduced and the axis of rotation of the rack has same height as the rotation axis of the warp beam. An independent claim is included for device for exchanging and/or transporting a rack module of weaving loom.
