Abstract (en)
The device has a sealing body with a disk-shaped film section (2) with a central through opening for sealed, material-engaging connection to a continuous sealing layer between the object and the substrate., a sleeve section (4) made in one piece with the disk-shaped film section and aligned with the through opening and a threaded rod (5) connected to the sleeve section in sealed manner and protruding through the sleeve section and the through opening for fixing the object. An independent claim is also included for cladding for walls and ceilings.
