Abstract (en)

[origin: EP1696083A2] The mineral plate comprises a base plate and at least one profile member on the face side. The profiled member may be a thermoplastically-processed material which is partially reinforced. The thermo-plastically processed material may comprise 5 to 70% of the profiled member, preferably 5 to 25% of a component section which may be at least partially reinforced. The thermoplastically processed material of the profiled member may be made from a group of materials comprising polyolefins, polyamides, polyvinyl chloride and ethylene-vinyl-acetate. The profiled member may have a stiffness of between 40 to 50 MegaPascal.
