Abstract (en)
Venetian blind comprises guiding cords (4) having longitudinal cords connected to each other but do not slide opposite a first end rail (1). The longitudinal cords start from the first end rail in a mutual distance which corresponds to two thirds of the width of the lamellae (3), preferably the width of the lamellae. The first end rail pivots about a pivoting axis (23) parallel to its longitudinal axis. Preferred Features: The longitudinal cords are fixed to the guiding cords on each side of the first end rail. An operating element (25) is hinged with the first end rail so that its pivots opposite the first end rail about an axis lying parallel to the longitudinal direction of the end rail.
