Abstract (en)
[origin: WO2005054067A1] Packaging (1) for a product comprises a packaging material (2) having a principal surface region (10) for displaying information relating to the product. A detachable coupon (4) overlies the principal surface region and is attached to corresponding areas of the principal surface region along a first edge (6) of the coupon by a perforation line and along a second opposing edge (8) of the coupon by a security seal (12, 14). The security seal is adapted to be released, in use, so that the coupon hinges along the perforation line and is subsequently detachable from the surface region by tearing along the perforation line.
