Abstract (en)
[origin: FR2864086A1] The cytotoxic factor is selected from the GM2AP/GM2/MRP14 and mutated GM2AP/GM2/MRP14 hetero-complex in which the mutated GM2AP corresponds to the SEQ ID NO :2 sequence. The detection and/or quantification of such a cytotoxic factor is carried out with a biological sample which is placed in contact with a capture antibody from those which bond specifically with the following proteins or complexes. The cytotoxic factor is selected from the GM2AP/GM2/MRP14 and mutated GM2AP/GM2/MRP14 hetero-complex in which the mutated GM2AP corresponds to the SEQ ID NO :2 sequence. The detection and/or quantification of such a cytotoxic factor is carried out with a biological sample which is placed in contact with a capture antibody from those which bond specifically with the following proteins or complexes: GM2AP, mutated GM2AP, MRP14, the GM2AP/GM2 complex, the mutated GM2AP/GM2 complex, and the MRP14?GM2 complex, where the mutated GM2AP corresponds to the SEQ ID NO :2 sequence. The sample is then placed in contact with a marked detection antibody selected from those that bond specifically with the above proteins, and the cytotoxic factor is detected and/or quantified by detection and/or quantification of the marked detection antibody.
