Abstract (en)
[origin: WO2005054852A1] This invention arises from the discovery that compounds capable of blocking cellular monocarboxylate transport can inhibit lymphocyte proliferation, offering up these compounds as therapeutic agents in various immune-mediated disorders and cancers. Accordingly, this invention relates, inter alia, to methods of screening compounds for their ability to treat certain cancers and immune-mediated disorders, particularly transplant rejection and rheumatoid arthritis. The invention also relates to methods of treating these diseases by administering a compound or compounds capable of inhibiting monocarboxylate transport and the use of monocarboxylate transport inhibitor compounds in treating such diseases.
