Abstract (en)

[origin: FR2864355A1] The case has a frame (1) for receiving an electrical door-contact module (2), and a clamp (3) to facilitate coupling with a complementary connector (4). The clamp is moved between decoupling and coupling positions of the case with the connector. The clamp retains the module in the frame in a locking position of the module. The clamp has rails (5) that slide on shoulder of ribs (6), when the module is in the locking position.
