Abstract (en)

[origin: US2005136996A1] A housing assembly ( 100 ) provides a device housing ( 102 ) having an outer surface ( 104 ) and having a compartment ( 106 ). A door ( 108 ) can be movably coupled to the housing where the door can be movable from a closed position through an open position. The door can at least partially enclose the housing compartment in the closed position. The housing assembly also provides a biasing member ( 110 ) biased against the door to move the door to the open position. In another embodiment, a housing assembly ( 200 ) can also include a frame member ( 201 ) designed to be removably interlockable with the housing assembly and a door ( 208 ) movably coupled to the frame member.
