Abstract (en)

[origin: FR2864414A1] The method involves performing measures relative to tracking a mobile terminal on a sub-system of a heterogeneous radio communication system, and transmitting the measures performed to another sub-system. A radio network controller (34), a serving mobile location centre (35), a SAS (36) and a gateway mobile location centre (39) are implemented to track the terminal by considering certain measures transmitted to the latter sub-system. An independent claim is also included for a mobile terminal tracking system to implement a tracking method.
