Abstract (en)

[origin: US2007155254A1] The invention relates to an electric connector element including a housing receiving first and second contacts; a first locking device for the first contacts, which can move between a release position and a locking position for the first contacts; a second locking device for the second contacts, which can move between a release position and a locking position for the second contacts; also including means for preventing maneuvering of the second locking device when the first locking device is not in a locking position for the first contacts.
