Abstract (en)
[origin: EP1698377A1] The equipment has several frame arranged one above the other whose inner surfaces are each provided with a cable network forming a climbing plane and a number of vertical supports (18) to which the frames can be attached. The vertical supports are joined to a mobile support (10) in a hinged manner. Erection cables are fed along the vertical supports with ends coupled to a winch and to the frames. The erection cables are joined to the frames so that they adopt defined vertical separations from each other in the erected state.
