Abstract (en)

[origin: EP1698482A2] Device for receiving paper blocks comprises a front and rear support plate, in which one moves and the other measures the path traveled. The measured value is automatically transferred by motor for further processing within the production machine e.g. on the opening of the glue nozzle or on the device for stamping cover grooves or on a stacking device or on the glue recognition sensor. Independent claims are also included for the following: (1) Block tongs for tensioning a book block; and (2) Method for controlling the tongs.
