Abstract (en)

Apparatus for applying adhesive to edgeboards (3) immediately before fixing said edgeboards (3) to the edges of the palletized block that has a support base (1) in which a seat base (2) for the edgeboards (3) is defined. A column (4) supports a head (5) having an adhesive deposit with corresponding dosing means behind the seat base (2). It also has a nozzle (6) that supplies the adhesive dosage to the edgeboard (3) in the selected point of it by facing the edgeboard to the nozzle and pushing a pedal (7). Thus, the operator selects the number of adhesive points to be arranged along the edgeboard (3) and its distance.
