Abstract (en)
[origin: EP1698568A1] The container has a parallelepipedic rigid box (2) with an opening surrounded by a peripheral shoulder and a peripheral rib (6). A flexible insulating material door (3) is embedded in the opening to close the container, so that the door is compressed against the rib. A door closing strap compresses the door against the shoulder. The door has a sleeve positioned on an edge of the door in which a rod (8) is engaged to form a hinge.
