Abstract (en)

A waste container includes an outer container (60) and an inner container removably mounted in the outer container. The inner container includes a body (10) and two handles (20). The body of the inner container includes a peripheral wall (13) delimiting an opening. The peripheral wall includes two engaging sections (14) on two opposite portions thereof. Each handle includes two ends (21) pivotally coupled to the engaging sections respectively. Each handle is pivotable to an upward position allowing carriage of the inner container. Each handle is pivotable to a resting position for retaining a peripheral edge of a bag mounted in the inner container.
