Abstract (en)

[origin: EP1698739A1] The present invention relates to a system for fastening roofing tiles provided on a pitched roof surface. The system comprises a plurality of roofing tiles, each with a tile length running in the direction of the pitch of the roof surface and a tile width running transversely thereto; a plurality of battens running horizontally parallel to one another, which are fixed to an underlying roof structure at a mutual spacing of approximately the tile length; and a plurality of tile clips with which at least a number of the plurality of roofing tiles is fastened. The system further comprises a system of wires which extends over the roof surface and is provided under the battens. Each tile clip is provided with a tile-engaging part for engaging a tile and a hook part for hooking onto a wire of said system. The tile clips are further provided with adjusting means for setting the distance between, on the one hand, the point of engagement on the roofing tiles and, on the other hand, the point of engagement on a wire of said system. The invention further relates to an assembly for a system according to the invention and to a method for fastening roofing tiles.
