Abstract (en)

[origin: EP1698777A2] Operating method involves monitoring system (46), which monitor whether the control member (16) is controlled outside of a projected fuel injection (36). A measure is executed depending upon the result of the monitoring. The injector is controlled with a signal (U), which influences the distance of a control member of the injector. Independent claims are also included for the following: (A) Computer program; (B) Electrical storage medium; and (C) Control unit for internal combustion engine.
