Abstract (en)
[origin: EP1699023A2] The lock has a key-operated latch released after insertion of a coin. A shutter holds the latch in back-closed position. The shutter is moved from edges of the coin from a locking position to releasing position. A ratchet lever (2) is deviated from a special key in a holding position holding the shutter. The lever is controlled by forces supplied by closing operation of the latch during closing of the latch.
