Abstract (en)

A method for handling the information generated by an info-telematic system (5a) on board a vehicle to be supplied to the driver of the vehicle through human/machine-interface apparatuses (2), the method comprising the steps of: detecting a set of parameters associated to the dynamics of the vehicle, and/or to the environment external to the vehicle, and/or to the actions of driving performed by the driver of the vehicle; estimating, on the basis of said detected parameters, a series of levels of partial risk, each of which is associated to a corresponding situation capable of modifying the level of commitment to which the driver is subject when driving the vehicle; calculating on the basis of the levels of partial risk a level of overall risk associated to the set of the situations that are likely to modify the level of commitment to which the driver is subject when driving the vehicle; establishing, according to the estimated overall level of commitment, an order in which the information coming from the on-board info-telematic system (5a) must be generated towards the user; and finally controlling the information generated by the human/machine-interface apparatuses (2) according to the established order.
