Abstract (en)
[origin: WO2005061356A1] The invention discloses a sealing arrangement (10) which includes a body (12) having a first support means (14) being adapted to support a supply of adhesive sealing tape (16) and a second support means (18) being adapted to support a supply of an intermediate strip (20). During use, the intermediate strip (20) is fed for adhesion to the sealing tape (16) whereafter the sealing tape is attached to an object such as a container, so that the intermediate strip is sealed between the sealing tape and the container. The sealing tape has a transparent part (24) so that the intermediate strip is at least partially visible through the sealing tape.
