Abstract (en)

[origin: FR2864095A1] Pollutant elimination procedure for elastomer component comprising immersing the component in a solvent, such as ethanol, to extract any pollutants with a low molecular weight, where the process is carried out in an extraction column in which the ethanol, at a preferable temperature of between 25 and 70 [deg]C, can be circulated and for a preferable duration of between 2 hours and 48 hours, is new.
