Abstract (en)
[origin: WO2005063907A1] The invention relates to an adhesive film consisting of a thermoplastic and optionally one or more resins. According to the invention: a) the adhesive system has a softening temperature that is greater than 65 DEG C and less than 125 DEG C; b) a melt-flow index (ISO 1133) that is greater than 3 and less than 100 cm³/10 minutes; c) a storage modulus G', measured according to test method A, at 23 DEG C that is greater than 10⁷ Pas; d) a loss modulus G'', measured according to test method A, at 23 DEG C that is greater than 10⁶ Pas; e) and a crossover, measured according to test method A, of less than 125 DEG C.
