Abstract (en)

[origin: WO2005064059A1] Disclosed is a device for a power loom, which is mounted between a pre-winding apparatus and a weft-picking apparatus and is provided with a third deflection element (18) that is disposed between two other deflection elements (13, 14). Said third deflection element (18) can be moved along a trajectory extending around a thread-depositing apparatus (20) by means of an electric drive unit (16).
