Abstract (en)
[origin: WO2005064067A1] The aim of the invention is the production of a dishwasher, the programme control of which permits the installation of the programme control module in the dishwasher, a subsequent programming of the programme control and a change to the rinse programme sequence pre-programmed in the programme control. Said aim is achieved, whereby an electronic programme control, for the control of rinsing programme sequences, is provided with a programmable control module (1), comprising an interface (8), for the external programming of at least one rinsing programme sequence, carried out by the programme control, which may be directly contacted from outside the dishwasher. By integrating an interface (8) which may be directly contacted from outside the dishwasher, for the external programming of rinsing programme sequences in the control module (1) of the programme control, the programme control can be installed in the dishwasher without pre-programming and programmed in a final step, or after the production of the dishwasher. Said dishwasher thus has the advantages that the programming of the programme control can also be carried out after the production process is complete and the rinsing programme sequences pre-programmed in the programme control can be altered, exchanged or extended after the production process, whereby preparation complexity in final assembly is reduced and the product flexibility is increased.
