Abstract (en)  
[origin: WO2005059858A1] The present invention provides for a monitoring system for an object, the system including at least one sensor input for receiving an alarm signal from a sensor disposed at or adjacent to the object, a re-programmable memory unit that contains contact address data that is indicative of a contact address of a predetermined handheld communications device and a processor that is responsive to the alarm for accessing the contact address data and sending a GSM alert signal to the communications device. The invention also provides for a method of monitoring an object, the method including receiving an alarm signal from a sensor disposed at or adjacent to the object, containing contact address data in a re-programmable memory unit, the data being indicative of a contact address of a predetermined handled communications device and being responsive to the alarm for accessing the contact address data and sending a GSM alert signal to the communications device.
