Abstract (en)

[origin: WO2005064895A1] This invention concerns a system for pushing a sender-personalized notification. It comprises a sender device (401) and a recipient device (402) wherein the sender device is configured to select the sender-personalized notification and a destination for the sender-personalized notification corresponding to the recipient device and to send the sender-personalized notification to the recipient device. The recipient device is also configured to receive a signal corresponding to the sender-personalized notification and to process it for incoming calls originated from the, or an entity associated with the, sender device.
