Abstract (en)

[origin: FR2864746A1] The electrode has a portion of an electrical conductor wire covered by a dielectric sheath material. A support includes an opening, where the portion of the conductor wire extends through the opening. Segments of the conductor wire are spaced regularly with respect each other. A tension system (17) exerts tractive force to two ends (10a, 10b) of the portion of the conductor wire. An independent claim is also included for a gas stream processing device including a plasma generator.
