Abstract (en)
[origin: EP1700629A2] The seesaw has a base, and a bar (2) movable around a pivot bearing (3) that is formed as a ball-shaped head and received in a bearing shell, where the bar is tiltable and swivellable. The bearing is arranged at the upper end of a support (7). The bearing shell is made up of two shell halves, which are received in a recess at the lower side of the bar. Two bar sections are detachably connected with each other along a connection line. The shell halves are partially covered by a holding plate that is fixed at the bar.
