Abstract (en)

The handle has a rotating cross (13) at which locking rods (15, 16) are fastened. An actuating disk (2) includes an actuating unit, and a gripping unit is provided at the cross. The actuating unit and the gripping unit operate together such that the actuating unit movement is transferred to the gripping unit for rotating the cross. The handle is integrated in a sliding window and is operated in the sliding direction of the window.
