Abstract (en)

[origin: EP1700984A2] An abutment plate (3) for a lockup mechanism of wings of a door/window unit made in metal section bar and comprising a fixed frame (1) and at least one wing (4) hinged to the frame (1). The plate (3) has a substantially squared shape with an internal arm (3b) attached in a grooved housing (2) formed along the edge of the frame and an external arm (3a) projecting therefrom and comprises holding means (10, 11, 12, 15, 16) suitable for fixedly engaging with two walls (2a,2b) of the grooved housing (2) projecting internally one towards the other for locking said plate in said housing. In particular provision is made for two diverging locking tabs (16) extending from said internal arm and suitable for being bent, on assembly, for fixedly engaging under the wall (2b) of said housing. A squared appendage (12), formed through blanking from said external arm (3a) and extending therefrom, abuts on the same wall (2b) in a forced manner.
