Abstract (en)

The device has a reinforcing unit (14a) that runs over a length of a reinforced concrete tubing in a circumferential direction (16a) with respect to a bent segment form. The reinforcing unit is bent at an angle from the circumferential direction to a radial direction with respect to the segment form. A set of retainer units (26a, 28a) are designed as a single piece with the reinforcing unit. An independent claim is also included for a method of manufacturing a reinforced concrete tubing.
