Abstract (en)
The system (1) has a testing tag electronically selected as testing authentication (2). The elevator system is tested in a time interval. An updated valid certification is renewed using the authentication, where the certification is time restricted. The authentication has a measuring unit for time measurement, and a storage unit for storing test data, which is automatically isolated into a selection device or an evaluation unit. An independent claim is also included for a method for testing an elevator system.
