Abstract (en)
[origin: EP1701369A1] The switching device has a base body (1) and connection module with a connecting terminal for a main supply current of the switching device. The switching device-base body and the connection module are detachably connected with one another. A electrical plug in connection is provided between the connection module and the switching device-base body. The base body is designed such that it is directly mounted in a bearing rail. An independent claim is also included for a switching device-arrangement with the electromechanical switching device.
