Abstract (en)

[origin: EP1701585A2] A method for wirelessly adjusting one or more hearing devices (1, ..., 3) with a central unit (4) is presented, the method comprising the steps of: - establishing a wireless network (6) wirelessly connecting the central unit (4) to hearing devices (1, ..., 3), which are responsive to said wireless network (6), - detecting said hearing devices (1, ..., 3), - identifying one or more of the detected hearing devices (1, ..., 3), - selecting one or more of the identified hearing devices (1, ..., 3), - establishing a wireless link from the central unit (4) to at least one of the identified hearing devices (1, ..., 3), and - adjusting the at least one identified hearing device (1, ..., 3). Therewith, an audiologist is able to unambiguously assign one or two hearing devices (1, ..., 3) in a fitting session, even if multiple hearing devices are within the range of the wireless network (6) or wireless transmitter, respectively.
