Abstract (en)

[origin: WO2005061263A1] Disclosed is a motor vehicle cruise control comprising a standstill function, a control element (14, 20) for activating the cruise control, and an activation lock which prevents activation when the brake pedal (10b) is actuated. The inventive cruise control is characterized in that the activation lock is ineffective when predefined conditions, including the condition that the speed is not greater than a specific activation speed, are met.
