Abstract (en)

[origin: WO2005056466A2] A combination beverage service item and condom holder. The beverage service item, which may comprise a cocktail napkin, a coaster, a table tent, a bottle hangtag, etc., includes a first layer and a second layer which are disposed in superimposed relationship. Portions of the two layers are joined together along a perimeter so as to define a pocket for enclosing a condom therein. The perimeter may not entirely enclose the pocket so as to provide the user access for removing the condom, or it may entirely enclose the pocket. Means, such as a perforated tear line, tear strip, zipper, etc., may be provided to assist the user in gaining access to the enclosed pocket. The two layers may be formed of the same sheet stock material, or they may be formed of two different sheet stock materials. User readable indicia may be disposed on the beverage service item.
