Abstract (en)

[origin: WO2005059281A1] The invention relates to a closing cylinder comprising a cylinder core. A centering sink for centering the key tip is provided on the front surface of the cylinder core in the input area of the key channel. The invention is characterised in that a centering groove (8), which is disposed on the centering sink (6) on the input area, is also provided, said centering groove being arranged on the longitudinal centre plane (9) of the key channel (5), whereby said longitudinal centre plane has a width which corresponds at least to the width of the key channel and the maximum depth thereof (H) exceeds the depth (T) of the centering sink.
