Abstract (en)

The structure has a rolling equipment (M) having a horizontal lower platform (2) provided with a rotating unit. A free space at the front of the platform receives a protection drum and an aspirator block that is provided with two connection sockets. The drum receives in its upper part a case (9) arranged with a lower base, such that the sanding machine is disposed vertically while it is maintained and locked in position by locking and fixation units, and an upper plate forms a side table to receive the units.
