Abstract (en)

[origin: EP1702858A1] The bag has bands (41-43) partly disposed on a common unit (40), where the bands (42, 43) are removable and are placed on a gusset for assuring multiple opening/closing. The band (41) maintains the gusset in folded state. One of the bands (42, 43) is situated on an end of a wall (26) of a bag body (20) whereas the other band is situated at another wall opposite to the wall (26) and receives an end of the gusset. Independent claims are also included for the following: (1) a method for fabricating a packaging bag (2) a packaging bag fabrication machine.
