Abstract (en)
[origin: EP1702865A1] The device has a protection surface (22) including a projecting unit (24) at one of its sides and tabs (32) at its periphery, where free edge of the tabs are curved or flared. An opening of a gasket (10) is fixed in the unit (24) by wedging or clipping. A hollow boss (28) is arranged at the level of one of the sides of the surface. The surface has dimensions and shapes that are adapted for forming a flapper for an opening arranged at the level of a sub-assembly e.g. collector, when the device is placed on the sub-assembly.
