Abstract (en)

[origin: EP1703128A1] Pump (2) has a retainer (240) in the insert (24), in which a stop surface (240a) is provided for the end of bush (25). Bush is so formed that a circular gap is formed around bush over the entire length of bush between the external wall of bush and the inner wall of housing (20) so that the bush is held simply by the retainer of insert and by pressing the bush from other end of bush centered in the housing.
