Abstract (en)
[origin: EP1703227A2] The exchanger has two coils (20, 30), which are made from heat conducting material. The coils have same coil distance, where mutual offset of the coaxially arranged coils amounts to a half of the coil distance, so that the windings of the coils radially overlap one another. An axial coil distance and a diagonal gap between the coils are fixed by a spacer. A deflector plate divides volume bounded by the coils in to two partial volumes. Independent claims are also included for the following: (1) a method of operating a heat exchanger (2) a method of manufacturing a heat exchanger.
