Abstract (en)

[origin: EP1704927A2] The method involves discharging gas flows into a defined mixing space (3). The gas flows are loaded with fine particles in the defined mixing space, where the fine particles are discharged to the mixing space via an injector nozzle. Produced aerosol is discharged from the mixing space via an outlet. Substances formed from particles of the aerosol are directly introduced to the mixing space via a substance line. An independent claim is also included for a device for producing aerosol.
