Abstract (en)

[origin: EP1705125A1] The package has a tray (1) with two longitudinal walls (5) and two transversal walls. One end of the wall (5) has a part (5a) whose height with respect to the tray's base is equal to that of articles (2). A cover (3) has two longitudinal and one transversal panels (11, 12) articulated by folding lines that are perpendicular to the base. The cover is supported on the articles. The transversal wall (6a) is disintegrated from flaps, and the cover and the wall (6a) are tilted outwards for removing the cover. An independent claim is also included for a method of fabricating a package.
