Abstract (en)

Device (10) for impregnating fabrics (11) in a treatment liquid (19), comprising a tank (12) associated with impregnation cylinders (15a, 15b, 15c), during use at least partly immersed in the treatment liquid (19) contained in the tank (12). The latter consists of at least two sections (112a, 112b, 112c) communicating with each other and disposed, during use, on different levels progressively decreasing in the direction of feed of the fabric (11). The device (10) also includes a member to regulate the impregnation time of the fabric (11), making it transit in only one, or only in some, sections (112a, 112b, 112c) of the tank (12), and excluding others.
