Abstract (en)

[origin: EP1705303A2] The system has boards (1), whose front and rear sides form presentation surfaces. A receptor arrangement reversibly and detachably connects the boards at tables and/or walls of a room, and another receptor arrangement is reversibly and detachably fastened to the boards for the formation of room-parts. The former receptor includes individual rails running in different contours, where the rails are fixed to the tables and/or walls.
