Abstract (en)

The device has a horizontal and rectilinear flexible metallic strip (1) and a flexible metallic strip (2) fitted with a lower part of a sub-tile plate (8) and having the same width and length. A wire mesh is soldered to the metallic strips by welding points (5), such that the metallic strips are integrated and form a single part (4). The metallic strip (1) forms corrugations having the same length and width of the wire mesh.
