Abstract (en)
[origin: EP1705333A2] The reader (66) is fixed in the casing (10). Each drawer (12) has a transmitter (62, 64) sending data and/or energy without contact, between an identification carrier (30) held in the drawer, and the reader. When the drawer is closed, the holder (14) is located in the detection zone of the associated transmitter. The transmitters include coils for inductive data transmission, or alternatively an optical diode transmission system is used.
