Abstract (en)

[origin: EP1705336A1] The device has a slide (15) mounted, in translation movement, at a front edge (16) of an underside, forming an inspection door, of a roller shutter (1). The front edge delimits, on a box (2) of the roller shutter, a slot (9) for the passage of an apron of the roller shutter. The slide engages, by sliding like a tenon in a mortise, on a socket joint section (17) equipping a slide inlet (18) by molding. An independent claim is also included for a roller-shutter comprising a box, an underside and a locking device.
